

## IF THANOS WAS A DEVOPS ENGINEER

**MOTO:** *Balancing the universe of code and infrastructure, striving for perfect harmony through automation and optimization*

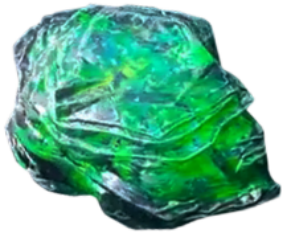

=

**POWER STONE**

**SHELL SCRIPTING**

*Empowers users to command the operating system efficiently, automating repetitive tasks through ad hoc commands or script files.*

=

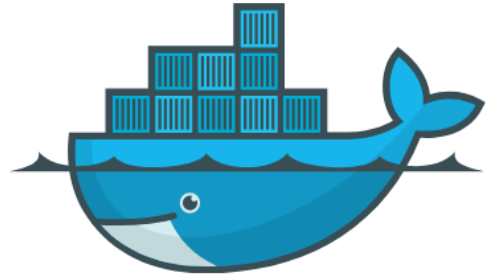

TIME STONE

GIT

*Enables users to save project states as commits, allowing for temporal navigation to specific points in development history.*

=

**REALITY STONE**

**DOCKER**

*Creates isolated instances of software, such as Nginx or Linux subsystems, without the need for explicit installation on the host machine.*

**MIND STONE**

=

**KUBERNETES**

*Controls and monitors a multitude of Docker containers, orchestrating their deployment, scaling, and management across clusters.*

=

**SPACE STONE**

**ANSIBLE**

*Travels across machines, locally or remotely, for software configuration and maintenance, facilitating seamless management of diverse infrastructures.*

**SOUL STONE**

=

**TERRAFORM**

*Shapes and controls cloud resources and infrastructure through Infrastructure as Code (IaC), offering a unified approach to provisioning and managing cloud services.*

**GAUNTLET**

=

**JENKINS**

*Acts as a central hub, integrating various DevOps tools and processes for streamlined automation and optimization of software development pipelines.*
